

BreakThrough

Expert Advisor BreakThrough is a trading system for platform Metatrader4. The system was developed on Metatrader 4 Version: 4.00 Build 509.

BreakThrough is not full system, it only opens trade when it crosses trend line you created on chart. It buys/sells depending on the name of the trend line. If you name the line "buy", without quotes, the system will open a buy trade after crossing the line. If you name the line "sell", the system will open sell trade after crossing the line. First you position your trend line on chart and then change its name to "buy" or "sell". The system will open only one buy, one sell trade. You can remove the line and place another if you want the system to continue to open a trade on a trend line crossing. You can set take profit and stop loss in expert advisors settings, but also create take profit trend line, simply create a trend line and name it "buyTP", "buySL", "sellTP", "sellSL" according to function you want to. If the price goes above buyTP or under buySL the system will close all buy trades with its magic number, if the price goes under sellTP or above sellSL the system will close all sell trades with its magic number.

It is best to use a forex cash back service. Not only for this system, but generally it is good to take some cash back from spreads you paid. I use and recommend [CASHBACK forex](#) service.

1. Instalation

Copy file **BreakThrough.ex4** in the directory *experts* where you have Metatrader4 installed (eg.: *C:\Program Files (x86)\MetaTrader4\experts\BreakThrough.ex4*).

2. Settings

2.1. MagicNumber

Unique number of system, if you use more systems at once, they should have different magicNumbers, so they know which trade belongs to which system. It should not be zero. Zero is reserved for manual opened trades.

2.2. Lots

Lots for trades.

2.3. TakeProfitPip

Take profit for trades. Take profit will be set after the trade is opened. It can be zero to not use this setting.

2.4. StopLossPip

Stop loss for trades. Stop loss will be set after the trade is opened. It can be zero to not use this setting.

2.5. TrailingStop

Trailing stop for trades. It can be zero to not use this setting.

2.6. BuyTrendLine

Just color in which will the system color the "buy" trend line after renaming.

2.7. SellTrendLine

Just color in which will the system color the "sell" trend line after renaming.
